

AVAILABLE NOW DISCOUNTED BROADCAST EQUIPMENT WITH FINANCING

For over 6 years now Avation of Singapore has been supplying broadcasters around the globe with a range of high quality control room equipment. Our equipment can be found in television stations in the Pacific Islands, Australia, The US, South America, Europe and The Middle East.

Demand from our existing client base has prompted us to expand our product line.

We are delighted to share our ability to now supply **any type of equipment** for all types of broadcast facilities; television or radio; terrestrial or satellite. Our complete range of equipment runs from studio requirements to all control room stages to transmission facilities including antennae panels, transmitters and towers, plus pre and post production, editing and of course all facets of DVB-T planning.

Through our parent company Advent Television (the world's first Digital Television broadcaster) we can not only supply the equipment but we are happy to offer installation and training services also.

Our location in the technological hub of South East Asia and the rate of our local currency only strengthens the opportunity for us to give you an **exceptionally competitive deal**.

The best news is we have recently forged an arrangement with consulting advisors to the Export-Import Bank of The United States which enables the provision of commercially realistic **financing for broadcast equipment**. More so, the Exim finance policy allows for the provision of equipment to developing businesses or regions as they are willing to assume credit and country risks that private sector banks are unable or disinclined to accept.

Whether you need financing or any type of broadcast equipment or both, remember Avation.

Keep in mind, equipment procured from Asia is not expensive and with international shipping it can be with you in a matter of days.
